

Gas supply status report

As at: 1pm, 5 October 2022

- Since 23 June 2022 the alert level of the gas emergency plan has been in place.
- The situation is tense and a further worsening of the situation cannot be ruled out. The gas supply in Germany is, however, currently stable. At present, the security of supply in Germany continues to be safeguarded. The Bundesnetzagentur is monitoring the situation carefully and is in close contact with the system operators.
- The events at the Nord Stream 1 and 2 pipelines are not affecting gas supply. No gas has been delivered through Nord Stream 1 since the beginning of September anyway, and Nord Stream 2 has never been put into operation. The German Federal Ministry of the Interior and Community, as the ministry responsible for security and counter-sabotage issues, is in close contact with the German security authorities and the Danish and Swedish partners in connection with the events.
- Gas continues to be injected into storage. The total storage level in Germany is 92.53%. The storage level at the Rehden facility is 79.03%.
- Wholesale prices are still fluctuating significantly, but have decreased considerably recently and fallen by more than half over the past week. However, companies and private consumers still have to expect very high gas prices.
- The Bundesnetzagentur explicitly emphasises the importance of using gas economically.

The data on imports, exports and gas production are currently incomplete owing to technical problems in the data transmission of gas flows. They will be updated as soon as the problem has been resolved. The data were last updated on 30 September 2022.

1. Gas flows

1.1 Gas imports

(GWh/day)

1.2 Gas exports

(GWh/day)

1.3 Gas production in Germany

(GWh/day)
