# Gas supply status report

As at: 1pm, 29 December 2022

- Since 23 June 2022 the alert level of the gas emergency plan has been in place.
- The gas supply in Germany is currently stable. The security of supply is safeguarded at present. Overall, the Bundesnetzagentur still views the situation as tense and cannot rule out a further worsening of the situation. The Bundesnetzagentur is monitoring the situation carefully and is in close contact with the system operators.
- More gas is being injected into storage than withdrawn from it. The total storage level in Germany is 88.84%. The storage level at the Rehden facility is 90.54%.
- Gas consumption in the week beginning 19 December 2022 was 23.8% lower than the average consumption of the past four years and down by 37.4% compared with the previous week. Temperatures were 2.3°C higher than in the previous years.
- The temperature-adjusted consumption in the weeks beginning 12 December and 19 December was 12.4% lower than the reference value of the past four years and was thus in the critical range.
- Temperatures this week are forecast to be 6.82°C and thus back in the normal range for the time of year, so lower gas consumption is expected.
- Wholesale prices are fluctuating greatly and have recently seen a decrease. Businesses and private consumers must continue to adapt to a significantly higher price level.
- The Bundesnetzagentur stresses the need to save gas. Avoiding a national gas supply emergency this winter depends on three things: cutting gas consumption by at least 20%, LNG terminals starting operation at the beginning of next year, and the winter decrease in imports and the increase in exports – which are currently at a particularly low level – being relatively small.

## 1. Gas flows

### 1.1 Gas imports

(GWh/day)

## 1.2 Gas exports

(GWh/day)

The Bundesnetzagentur was informed that the data reported for flows via the Netherlands since 23 December 2022 are incorrect due to measurement errors. The figures will be corrected as soon as possible.

## 1.3 Gas production in Germany

(GWh/day)

## 2. Storage levels in Germany

### 2.1 Development of storage levels in Germany

(%)

### 2.2 Gas storage levels in Germany: daily storage level and change in storage levels

(percentage points)

### 3. Consumption of natural gas

#### 3.1 Gas consumption of industrial customers (weekly average) (GWh/day)

#### 3.2 Gas consumption of household and commercial customers (weekly average) (GWh/day)

#### 3.3 Gas consumption in Germany (weekly average) (GWh/day)

## 4. Gas price

### 4.1 Wholesale gas prices (€/MWh)
